DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a preparation of inactivated organisms.

Group II, claim(s) 9-16, drawn to a method of making an immunogenic preparation of Group I.

Group III, claim(s) 17-20, drawn to a method of immunization using inactivated organisms of Group I.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common technical feature of the instant Application is inactivation of whole organisms using carbon dioxide at or near supercritical pressure and temperature conditions. However, as Applicant points out in the instant Specification, Dillow, et al. (6,149,864) have applied the same method; the Detailed Description of the Invention of the '864 patent recites:

"The methods and apparatus disclosed herein are used to sterilize biomedical materials, such as polymers, using supercritical fluid carbon dioxide. As used

herein, sterilization refers to killing at least 10.sup.6 organisms, and more preferably 10.sup.8 organisms, or greater than 99.9999% of those present. Viability of cells is determined using standard techniques known in the art."

Thus, the common technical feature of the instant Application is the same as that of the '864 patent and the instant Application lacks Unity.

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1. The species are as follows:

Various "whole organisms", adjuvants, chemical additives, antibiotics and/or antibodies.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Whole organisms (all claims generic)

Chemical additives (claims 7 and 10-14)

Adjuvant (claims 6-7 and 18-19)

Antibiotic (claim 8 and 20)

Antibodies (20)

The following claim(s) are generic: All of the claims are generic.

4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The common technical feature of the instant Application is inactivation of whole organisms using carbon dioxide at or near supercritical pressure and temperature conditions. However, as Applicant points out in the instant Specification, Dillow, et al. (6,149,864) have applied the same method; the Detailed Description of the Invention of the '864 patent recites:

"The methods and apparatus disclosed herein are used to sterilize biomedical materials, such as polymers, using supercritical fluid carbon dioxide. As used herein, sterilization refers to killing at least 10.sup.6 organisms, and more preferably 10.sup.8 organisms, or greater than 99.9999% of those present. Viability of cells is determined using standard techniques known in the art."

Thus, the common technical feature of the instant Application is the same as that of the '864 patent and the instant Application lacks Unity.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stuart W. Snyder whose telephone number is (571) 272-9945. The examiner can normally be reached on 9:00 AM-5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce R. Campell can be reached on (571) 272-0974. The fax phone
